

## Chip Happens: Dealing with Mug Injuries

Oh no! Your beloved mug has suffered a chip. Don't panic, follow our chip management protocol:

1. Assess the damage. Is it a small chip or has your mug been reduced to rubble?
2. For small chips, apply our patented MugMend<sup>®</sup> enamel (sold separately) to smooth out the edge.
3. For larger chips, consider promoting your mug to a pencil holder.
4. If your mug is beyond repair, hold a small ceremony and thank it for its service before recycling.

Warning: Continuing to drink from a chipped mug may result in unexpected exfoliation of your lips.
